FLEET MAIL

Secure, stable, cloud-based email service designed to meet the challenges of the remote maritime environment.

Fleet Mail aims to maximise productivity onboard, so you can rest assured your email is secure and always available.

FLEET MAIL

With Fleet Mail we aim to deliver a secure, stable, cloud-based email service designed to meet the unique demands of the remote maritime environment.

OPTIMISED FOR USE AT SEA

Fleet Mail aims to maximise productivity onboard, it operates across all satellite networks and providers and works with any front end client such as Outlook. You can continuously access your emails, even if your systems are offline. There's no need to be concerned about breaking connection when transitioning in and out of port; Fleet Mail will automatically switch between Inmarsat's satellite networks, LTE, 5G and mobile connectivity, so your crew can confidently continue working.

'ONE CLICK' SET UP AND DIAGNOSTICS

Fleet Mail is quick and easy to install with 'one click' set up. There's no need for any IT support or hardware, simply install anywhere at any time. Flexible to run on the latest Windows operating systems, Fleet Mail makes it easier for shore-based IT teams to step in remotely for diagnostics and resolution should any IT queries be logged.

ENCRYPTED AND SECURE

Don't let the growing threat of cybercrime at sea infiltrate your email system. Fleet Mail integrates advanced security features as standard for complete peace of mind. Protect your vessel and crew from the costly dangers of malware, viruses, spam and social engineering attacks with multi-layered detection engines.

Never let your guard down with end-to-end security you can reply on. If you need an extra level of security beyond email, check out Fleet Secure Endpoint to protect and defend every entry point into your vessel's IT network.

COMPLY WITH IMO REQUIREMENTS ON CYBER SECURITY

Advanced built-in security features identify and stop threats before they get onboard:
- Advanced threat protection
- Additional protection against malware and zero-day threats
- Anti-Phishing: Comprehensive protection against email social engineering attacks
- Spam management: Control of potential spam, whilst allowing business emails

- Email Antivirus: Guards email against all known virus signatures through multilayered detection engines
- Secure Archiving: Seamless and secure storage/retrieval of emails and attachments for up to 7 years
- Business Continuity: Provides an auxiliary email client for the continuity of vessel operation
- Fleet Mail Deploy: Over the Air software upgrades to keep your Fleet Mail software up to date

Secure, stable, cloud-based email service designed to meet the extreme challenges of the maritime environment.

HOW TO BUY
Fleet Mail is available to Fleet Xpress customers direct from Inmarsat.
